250ml

ANTIMICROBIAL

Sknworks Tattoo Assist can be used alongside green soap and has been formulated to cool and soothe the tattoo area whilst accelerating the skin's recovery.

Protect: After shaving the tattoo area, use Sknworks Tattoo Assist from the start to cleanse the skin's surface before applying your stencil. Allow the skin to dry, then apply the stencil.

Calm: If your client's skin is inflamed or sensitive use Green Soap to clean away any tattoo residue during your session. This assists Sknworks to calm, soothe and reduce redness.

Apply fresh paper roll and saturate with Sknworks Tattoo Assist, compress on the tattooed area for 5 minutes to cool, calm and soothe.

Soothe: For the best photo-finish results, saturate paper roll with warm water (25°C) and with gloved hands keep the tattoo area warm for 5-10 minutes. Apply fresh paper roll saturated with Sknworks Tattoo Assist and leave on the skin for at least 15 minutes.

How should Sknworks Tattoo Aftercare be used?

To create the best environment for your customer's new tattoo, recommend Sknworks Tattoo Aftercare for use at home. Instruct your client to clean the tattoo with antibacterial soap and when dry lightly mist the tattooed area with Sknworks Tattoo Aftercare. Once the area has dried completely, then the customer is free to apply a pea sized amount of moisturiser to the area. This process should be repeated 2-3 times a day until the tattoo has fully healed.
